

What is Geography?

- Geography = study of land, water, people and other living things.
 - "earth's description"
 - affects where/ how we live

Geography Affects Us

- How we live?
 - island vs. mountain - jobs
house, clothes, food will be different
- Transportation = getting from place to place
- Many people live around water
 - uses:
 - transportation
 - food/farming
 - boating
 - swimming/bathing

Five Themes of Geography

- geographer = someone who studies geography
1. Location = place affects how we live
 2. Place = features make differences
 3. movement = people, goods, ideas move

4. Regions = places that have something in common

5. Human-environmental Interaction = people use and change land to meet their needs

Where is North Carolina?

Planet - Earth

Continent - North America

Country - United States

State - North Carolina

County - Alamance

City/Town - Graham

- Continent = very large land areas, mostly surrounded by oceans or seas

- Country = land under control of one government (gov't)

- State = USA has 50 states

- County = smaller part of a state with its own gov't (NC has 100 counties)

- within counties - cities, towns, neighborhoods, farms

Lesson 2 Relative Location

8-24-21

- relative location = describes where a place is in relation to other places or things.
- landmark - Something that stands out.
 - Ex. mountain, river, beach
 - Ex. tall buildings, stores, bridges

Directions

8-25-21

- Cardinal directions = north, south, east, west
- intermediate directions = northeast, southeast, southwest, northwest.
- compass rose = shows cardinal directions

Parts of a map

- Legend or Key: explains what the symbols mean.
- Symbols = stand for cities, rivers, forest and other things.
- title: It tells you what kind of information the map shows.
- Compass rose: shows both cardinal and intermediate directions.

- scale of miles = shows how far apart things are.
- map grid: numbers and letters that run along the sides and the top and bottom of the map.
Used to find the location of a place.

Lesson 3 Absolute Location

9-1-21

- absolute location - is the exact spot where a place can be found.
- Latitude and Longitude
- global grid - lines that cross each other on a map to show absolute location.
The lines are latitude and longitude.
- equator - imaginary line that runs around the middle of the earth.
- Prime Meridian - imaginary line that runs from the North Pole to the South Pole.
- latitude lines - drawn east - west (side to side)
around the earth. ← →
- degree - is a part of a circle or globe.
- Longitude lines - drawn north - south ↑
(up ↓ down)
- Hemisphere - half of a sphere
(northern - southern) (eastern - western)
-

- hurricanes - are large powerful storms that form over the ocean near the equator.
- eye of a hurricane - the center point of the storm. Clear w/ calm wind.
- meteorologist - scientists who study the weather.

Lesson 1, Ch. 3 Physical Features

- Physical features = natural, would be around even if humans weren't
ex: mountains, forests, plants, animals, climate.
- human features = things people have made
ex: roads, bridges, cities, farms, houses, schools, stores

Landforms = feature of earth's surface.

- Coastal plain = broad, flat land
 - long, skinny islands = Outer banks
 - capes = points of land that stick out into ocean
- Rolling hills = land begins to rise, called Piedmont (aka foot of the mountain)
 - fertile soil = good dirt for growing crops
- Mountains = Appalachian mountains, largest mountain range in eastern United States

A place of flowing water

- NC is beside Atlantic Ocean
- Tributaries = rivers that flow into other rivers
- River system = rivers throughout state
 - Largest in NC = Cape Fear River System
- Fall line = line connecting where one stream has a waterfall
 - * falling water can make electricity
- Sound = body of water between mainland and an island

Water Crops

- Reservoirs = man made lake to hold extra water from heavy rain
 - Stores water for cities, towns, farms in drought

Electricity

- turbine = inside dam along rivers that are like large fans that turn with water movement
- Electricity made by water power = hydroelectricity

Magnificent Atlantic

Waves = cut into shores, take sand/rock away

- make sea cliffs/caves/sand bars

Cycle of water

- Water evaporates into the air, then falls back to ocean/ground that goes into rivers, lakes, back to ocean

Ocean Animals

- fish
- shellfish:
 - Shrimp
 - Lobster
 - crab
- mammals
 - sharks
 - whales

A Home for Plants

- Habitat = place that provides shelter, food, and water
 - * natural home of plant/animal

- native = from a certain area
- NC has good habitat for plants
 - mild climate
 - plenty of water
 - variety of soil
- Plants =
 - Venus fly trap (rare)
 - ginseng (used for medicine)
- Balds = place without plants
- Trees =

- maple
- hickory
- spruce tree
- longleaf pine
- birch
- oak
- evergreen

A Place for Animals

- Poisonous snakes
 - copperhead (most common)
 - cottonmouth
 - rattlesnake
 - coral snake
- Beaver, raccoons, opossums, foxes, squirrels, rabbits are found every where
- Alligators (east), bears (west)
- fish / shellfish

Our climate

- Climate = patterns of weather in a place over many years
 - NC = mild (or temperate) climate
- humid, hot summers / mild winter
- mountains = colder

Reasons for Climate difference

- * Distance from large bodies of water
- * elevation = how high land is above sea level

Lesson 2 - Human Features

- Human Systems: anytime people use or move around in a place
ex: towns/cities

Choosing Where to Live

*Geography plays GREAT part *

- towns were built...
 - near roads/railroad tracks
 - near rivers
 - harbors
 - Soil was good for farming

Choosing because...

- jobs

- climate

- urban - community where houses, businesses are close together (busy cities)

ex: New York City

- suburbs - houses/businesses are more spread out

ex: Burlington

- rural - small town, plenty of land/pasture

ex: Show camp

- People and their environment
- Land has a lot to do with the way people live
 - food/crops
 - clothes
 - types of homes
 - Adapt - change something so it works better or fits better
ex: build bridge to get over river

Our Natural Resources

- Natural Resource = something found in nature that people use
 - water - drinking, bathing
 - soil - farming, forests
 - minerals/rocks - sell or make
 - forests - wood/lumber

Riches in the Ground = MINES

- generators) \rightarrow
 - Gold
 - Hiddenite
 - Mica
 - gravel
- Quarry = open site where stone is dug
- Clay
- Phosphate (fertilizer)
- Granite etc...

North Carolina Gold

- Gold Rush - in a short amount of time, many people moved or "rushed" to strike gold
- Searching for gold = occurred in shafts dug underground
 - ↳ tunnel-like

Taking Care of the Land

- to maintain healthy/beautiful place, the following need to be cared for
 - > land
 - > water
 - > air
 - > wildlife
- Preserves: land set aside in order to protect it and keep it natural

Coastal Plain

Ch 4. Lesson 1

- region = area that has something in common (ex - physical feature)

- desert
- city

- mountain

- coast

- regions with coal

- corn

(can be big or small)

(continent → neighborhood)

- land region = area of land

that share mostly one type
of land form

* coastal plain = area of flat land

next to Atlantic Ocean

- plain = area of flat land without
many trees

- Two Parts

① Tidewater / outer Coastal Plain

② Inner Coastal Plain

1. Land closest to ocean

Tides = water rise / fall each day

- flat, raised higher
- fertile soil
- agriculture = science of farming

Physical Features of Coastal Plain.

- Outer banks = large sandy islands found along coast of NC
 - barrier island = stand between ocean and mainland (blocks mainland from ocean)
- Sounds = area blended with salt and freshwater (brackish water)
 - Pamlico Albemarle = major sounds
 - Bogue, Core, Carrabelle = smaller sounds
- Rivers - empty to sounds
 - Cape Fear River = only NC river to flow to Atlantic Ocean
- wetlands = low wet land
- swamp = low wet area with trees and shrubs
- Pocosin = Native American word meaning swamp on hill
- Carolina Bay = shallow, oval lake
- Scientists think meteor shower struck making these holes
- Sandhills - rolling ridges of sand (not close to ocean)

towns - Southern pines
Raeford

* Human Features of Coastal Plain

- Natural features made people want to build cities here
- Port Cities
 - 1. Wilmington (largest coastal city)
 - 2. Morehead City
- most important port in NC
- grew near Cape Fear River meets Atlantic
- Cargo: goods carried
- exported: shipped out to other places

* Making a Living in Coastal Plain

- Agriculture: farming
 - Inner Coast Plain is home of tobacco farming
 - barns for curing (drying out) with heat
 - cotton
 - soybeans
 - peanuts → Coastal Plain growers are 3rd largest producers in US
 - veggies/fruits
 - sweet potatoes, corn, soybeans, cucumber, blueberries, strawberries

- Livestock: animals used/sold
to make money
 - mainly turkey, and hogs
- fishing
- manufacturing: making things in factories or by hand
- Service industries: things people do for other people to earn money
 - education
 - films
 - tourism: when people come from all over to visit a place (serving visitors)
 - military bases

* Life in the Coastal Plain

- Land is protected to enjoy natural beauty
- businesses and communities work together to improve environment

Lesson 2 The Piedmont p97-107

- Piedmont = "foot of the mountain"
↳ land between Coastal plain and mountains

- Physical Features of Piedmont Region

① Plateau

② Hills and valleys

③ Uwharries

① Plateau = high, mostly flat land

Piedmont is very wide plateau that has rolling hills near the mountain region

② As you move west from the beach, flat land becomes rolling hills → land becomes more and more hilly until Statesville where hills become mountains

③ Uwharries = hills that look like mountains

· rocky, thin soil = not good for farming

· NC Zoo is here!

- Human Features of Piedmont

① Farms

② Better roads / Railroads

③ Cities

① Farms

- Small river valleys were good for farming
- bottomland = flood plains along the rivers (good places to plant fields)

② Roads/Railroads

- tracks follow natural curves
- Piedmont Crescent: railroad that curves around Uwharrie mtn.

③ Cities

- Largest city = Charlotte
- Raleigh, Durham, Chapel Hill form the Triangle
- Greensboro, High point, Winston Salem form the Triad

Making A Living in the Piedmont

- Economy = the way people use resources to make a living

- ① Furniture-making and Timber
- ② Brick making from Clay
- ③ Water Power → power plants / drinking water
- ④ Research and Education
- ⑤ Government → Raleigh = state capital ↗
Business | Technology
Manufacturing
- ⑥ - Textile Mill = make cloth / yarn

governor's home is here!

Lesson 3. Mountains

11/8/21

P.108-121 (pp. 291-292)

Assorted mountains (pp. 291-292)

Physical Features of Mountain

- mountains

- high peaks and ridges

- Valley

• Appalachian Mtn

- run down east coast into southeast

- have smaller ranges within

• Blue Ridge Mtn. - named

because they look blue from
far away

• Black Mtn - dark evergreen
trees, Mt. Mitchell is here

(largest peak) and Asheville is
here (largest city in mtn. region)

• Great Smoky Mtn. - named

Because of smoky haze at peaks

- 800+ miles of trails

- highest peak = Clingman's Dome

• Snow

- mtn. region gets most snow
in NC

- snow/ice from January until March

- coves, valleys, and streams
 - Cove: small opening between ridges

- * measuring mountains
 - Dr. Mitchell began measuring mtns by using math to calculate air pressure at different heights
 - Thomas L. Clingman thought he measured the tallest peak but Mitchell measured a different way so tallest mtn = Mitchell Mtn.

Human Features of the mountains

- bridges
- cabins
- cities
- trail
- good roads
- overlooks
- tunnels
- parks
- schools
- railroads
- reservations

Making A Living:

- Farming
- Wood/Timber products
- mining
- industry
- tourism
- education

Lesson 1, Chapter 5 p130

Early People Lived Here

Paleo-Indian People

- About 12,000 years ago
- Paleo = means very old
- Migrate = move to another place in search of food, shelter or better climate
- Scientists believe people walked across land bridge that joined Asia and North America
- Hunter-gatherers = people who travel to hunt and gather food
- Made weapons/tools from stones and animal bones
- sharp points
- scrapers (scraps fur off animals)
- hides were used for clothing/bags

Archaic People

- As time passed, climate changed (became warmer and drier)
- Giant animals became extinct (no longer living/exist)
- hunted/lived in larger groups
- only moved when seasons changed

- people learned more skills as time went on
 - grinded stones
 - bone fishhooks
 - dug pits to store food during winter
 - new tools/weapons
 - atlatl = long wooden stick with hook and hand grip on other end (helped throw spears faster/harder)

Woodland People

- Lived in NC when Europeans arrived
- Different from other groups in NC
 - they became farmers
 - didn't travel much for food
 - settled in villages
 - skilled @ pottery (helped with cooking/storing food)
- Still hunted game (deer, fowl, etc.) with bows, and arrows

Many Tribes

- At least 34 communities or tribes in NC
 - spoke different languages
